osemwegiee@gmail.com | github.com/Ghost-tech-ng

PROFESSIONAL SUMMARY

Applied AI engineer building the backend services around language, vision and speech applications. Experience spans healthcare AI integrations, retrieval workflows, image-quality checks and Python APIs. Project work includes speech analytics and geospatial machine learning, with clear separation between model inference, application logic and analytical evaluation.

TECHNICAL SKILLS

AI applications: LLM and vision APIs, Gemini, LangChain, RAG, FAISS, Whisper

ML and analysis: Python, pandas, scikit-learn, GeoPandas, H3, clustering

Backend and storage: FastAPI, Node.js, SQLAlchemy, PostgreSQL, Redis, Supabase

Engineering tools: Docker, Git, GitHub Actions, pytest, spatial validation

PROFESSIONAL EXPERIENCE

Aedion AI

Aug 2026 - Present

AI Engineer / Lead Backend Developer

Full-time from August 2026; collaborated from May 2026.

- Develop healthcare chat and scan services using Gemini, LangChain and vision APIs, with structured responses and scan-history context.
- Improve image-input validation and application logic around skin and eye analysis, including quality feedback and severity handling.
- Build eye detection and cropping modules and tools to measure brightness, sharpness and capture behaviour.
- Contribute to V2 retrieval and provider-routing architecture, including conversation memory, fallbacks and audit components.

Elixir hospital platform

2026

Freelance Software Developer

- Extended an existing PHP and MySQL hospital platform with patient mobile workflows, wallet integration and interface improvements.
- Built React Native and Expo interfaces for records and appointments, alongside AI-assisted features for the clinical platform.

ToksNet

Oct 2025 - Jul 2026

AI Engineer / Lead Backend Developer

- Developed healthcare backend and AI integrations using Python, FastAPI and model APIs.
- Extended Elixir with maternity workflows, interface improvements and AI-assisted patient-record features using PHP, MySQL and Docker.

Osemwegie Eghosa Ephraim

Applied AI and Backend Engineer

SELECTED PROJECTS

PipeUp

github.com/Ghost-tech-ng/Loquor

Personal product | Working build in testing

React Native, Expo, TypeScript, Supabase

- Built audio recording, timestamped transcription, local practice history and AI coaching for a speech-practice app.
- Calculated pace, filler rate and pauses from word timestamps; built an authenticated Supabase gateway for transcription and usage quotas.

Lincoln Business Suitability Index

Freelance development | Geospatial analysis application

Python, scikit-learn, Flask, React, H3

- Built a business-location analysis pipeline with data acquisition, feature engineering, H3 zone scoring and spatial validation.
- Compared K-Means and DBSCAN clustering and exposed location scores through a Flask API and React and Leaflet dashboard.

ADDITIONAL EXPERIENCE

SenatraxAI | Freelance Backend Engineer | BODI — Jun 2026

- Built core and transaction services with TypeScript, Fastify, Prisma and PostgreSQL, including identity verification, payment webhooks and admin controls.

Sosotoba Institute of Technology | Backend Developer — Mar 2024 - Sep 2025

- Developed PHP and Laravel hospital features, maintained MySQL workflows and wrote backend tests.

Tryve Technologies | Junior Software Developer — Jun 2022 - Jul 2023

- Built client web features and API integrations using PHP, Laravel, Python and Node.js with TypeScript.

EDUCATION AND CERTIFICATION

B.Eng Computer Engineering | University of Benin | Jul 2024

Full Stack Web Developer Certification | ALX Africa | Feb 2023
